## 1. MATHEMATICAL TABLES (PAPERBACK)

To get **1. Mathematical Tables (Paperback)** eBook, make sure you click the web link below and save the file or get access to other information which might be highly relevant to **1. MATHEMATICAL TABLES (PAPERBACK)** ebook.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1916 Excerpt:  $XI = U + V$  and  $x_2 = -u - v$  are roots of the equation. (2) To solve  $\cos x - \sin x = c$ , where  $c$  and  $6$  are positive: Find  $u$  and  $r$  as above. Then  $x_1 = -(u + v)$  and  $x_2 = -(u - v)$  are roots of the equation. General Method of Solution by Trial and Error. This method is applicable to a numerical equation of any form, and can be carried out to any desired degree of approximation. It is especially useful when a first approximation to a root is already known. Write the equation in the form  $f(x) = 0$ , where  $f(x)$  means any function of  $x$ , and plot the curve  $y = f(x)$  for a sufficient number of values of  $x$  to obtain a general idea of the shape of the curve. Then pick out the regions in which the curve appears to cross the axis of  $x$ , and plot the curve more accurately in each of these regions. Thus, by successive approximations, plotting the important parts of the curve on a larger and larger scale, determine as accurately as necessary the points where the curve crosses the axis—that is, the values of  $x$  which make  $f(x)$  equal to zero. Thus, suppose that  $f(x) = 3.0$  when  $x = 2.6$  and  $-5.0$  when  $x = 2.7$  (see Fig. 1). Then the curve must cross the axis somewhere between  $x = 2.6$  and  $x = 2.7$ ; and since it will not vary greatly from a straight line between...
